BARGE 2 - proto P3 - field test log

L. Ferrand

Annecy / Bauges loops. Rider 62 kg + sandbags

Day 1 - Tue 10 June - 18°C, dry

42 km, flat lake road, total load 120 kg

Battery 100 -> 61 %. No issues. Steering light,

box stable even at 35 km/h.

Day 2 - Wed 11 June - 24°C

51 km. Two descents of the Semnoz. On the 2nd

descent slight squeal from rear brake, no fade,

braking OK. Battery 100 -> 38 %

Day 3 - Thu 12 June - 27°C, storm in evening

38 km, load 180 kg. Col de Leschaux descent:

BRAKE FADE (1st) - front. Lever to the bar,

stopped 10 min to cool. Pads glazed.

Rest of the day very careful.

Day 4 - Fri 13 June - workshop day, 0 km

Jonas fitted 4-piston front caliper + 220 mm rotor

(was 2-piston / 203 mm). New pads both ends.

Rear unchanged (2-piston, 180 mm).

Day 5 - Sat 14 June - 31°C (hottest)

58 km, load 200 kg. Long climb Col du Frêne.

motor thermal derate after 28 min, power ~60 %.

Recovered after 6 min stop. Battery 100 -> 9 % (!)

Sun 15 June - no ride

Day 6 - Mon 16 June - 22°C, cloudy

47 km, load ~~180~~ 200 kg. Long descent to Taverges.

Rode again - REAR this time. Front + pot perfect.

Day 7 - Tue 17 June - 19°C

33 km easy, 120 kg. Summary for Jonas:

- rear needs 203 mm rotor too
- derate. check firmware temp limit
- range at 200 kg in heat way below the 120 km claim
